AN INTEGRATED APPROACH TO TEACHING AND LEARNING

Introduction

Informed by *Literacy and Numeracy for Learning and Life* - The National Strategy to Improve Literacy and Numeracy among Children and Young People 2011-2020 and the School Self-evaluation Guidelines, this booklet contains practical examples of how teachers can use differentiated active learning methodologies, inquiry-based approaches to learning and ongoing assessment to enhance the key skills of literacy, numeracy and working with others.

According to the **Senior Cycle Key Skills Framework, NCCA, 2009**, “the ability to think critically and creatively, innovate and adapt to change, to work independently and in a team, and to be a reflective learner are prerequisites for life and for the workplace in the 21st century. In line with international trends and influenced by the Lisbon strategy and the OECD DeSeCo (Defining and Selecting Key Competencies) initiative, a framework of key skills has been developed as part of the curriculum and teaching and learning at senior cycle. In addition, these skills support the development and enhancement of the basic skills of literacy and numeracy which are crucial for learners to access the curriculum and for their future life chances.

Five key skills have been identified as central to teaching and learning across the senior cycle curriculum. These are information processing, being personally effective, communicating, critical and creative thinking and working with others. Many of the elements that make up these skills are already a feature of teaching and learning across subjects. The embedding of key skills in the curriculum will thus involve building on current practice but it also involves increasing attention to the skills and their potential for actively engaging learners. By embedding the key skills in the curriculum learners will be presented with a range of learning experiences and outcomes that will improve their present and future access to learning, their social interaction, their information and communication abilities and their ability to work collaboratively.”

**The Nature of Learning: Using Research to Inspire Practice (OECD, 2010)** “is essential reading for all those interested in knowing what research has to say about how to optimise learning in classrooms, schools and other settings. The questions addressed for the OECD by leading researchers from North America and Europe include:

- What do we know about how people learn?
- How do young people’s motivations and emotions influence their learning?
- What does research show to be the benefits of group work, formative assessments, technology applications, or project-based learning and when are they most effective?
- How is learning affected by family background?”

The full publication can be downloaded at this link [www.oecd.org/edu/ceri/50300814.pdf](http://www.oecd.org/edu/ceri/50300814.pdf)

A summary of this publication can be found @ [http://www.oecd.org/edu/ceri/50300814.pdf](http://www.oecd.org/edu/ceri/50300814.pdf)
Methodologies to Support an Integrated Approach to Teaching and Learning

Active Learning is generally defined as any instructional method that engages students in the learning process. Active learning requires students to do meaningful learning activities and think about what they are doing (meta-cognition) as individuals; pairs or structured groups. The core elements of active learning are student activity and engagement in the learning process. The benefits of active teaching and learning include: focus on the learner and learning; improved information retention; development of communication and higher order thinking skills; improved motivation and variety of learning opportunities. For a wide range of video vignettes of active learning strategies please go to www.theteachertoolkit.com. There are also many examples of literacy, numeracy and ongoing assessment strategies that promote active learning outlined in this booklet.

Collaborative Learning can refer to any instructional method in which students work together in small groups toward a common goal. The core element of collaborative learning is the emphasis on student interactions rather than on learning as a solitary activity.

Cooperative Learning can be defined as a structured form of group work where students pursue common goals while being assessed individually. The most common model of cooperative learning is that of Johnson, Johnson and Smith. This model incorporates five specific tenets, which are individual accountability, mutual interdependence, face-to-face promotive interaction, appropriate practice of interpersonal skills, and regular self-assessment of team functioning. While different cooperative learning models exist, the core element held in common is a focus on cooperative incentives rather than competition to promote learning.

Inquiry-based Learning is an instructional method where relevant problems are introduced at the beginning of the instruction cycle and used to provide the context and motivation for the learning that follows. It is always active and usually (but not necessarily) collaborative or cooperative using the above definitions. IBL typically involves significant amounts of self-directed learning on the part of the students.
# An Integrated Approach to Teaching and Learning

## New Strategies Should Be Introduced Using the Gradual Release of Responsibility Model of Teaching and Learning

<table>
<thead>
<tr>
<th>Role of the Teacher</th>
<th>Degree of Control</th>
<th>Role of the Student</th>
</tr>
</thead>
<tbody>
<tr>
<td>Applying</td>
<td>The teacher offers support and encouragement as necessary.</td>
<td>Students interact independently. They are in control of the content.</td>
</tr>
<tr>
<td>Guiding</td>
<td>The teacher scaffolds help and provides support and corrective feedback.</td>
<td>Students do the activity with help from the teacher or other sources at pre-determined points.</td>
</tr>
<tr>
<td>Sharing</td>
<td>The teacher provides the direction and invites the students to contribute.</td>
<td>Students contribute ideas and information. Decision making is negotiated between teacher and student.</td>
</tr>
<tr>
<td>Modelling</td>
<td>The teacher demonstrates the processes used while thinking aloud.</td>
<td>Students participate by actively attending to the demonstrations.</td>
</tr>
</tbody>
</table>

[www.pdst.ie](http://www.pdst.ie)
During the 1960s, Edgar Dale theorized that learners retain more information by what they “do” as opposed to what is “heard”, “read” or “observed”. His research led to the development of the Cone of Experience. The Cone was originally developed in 1946 and was intended as a way to describe various learning experiences. Essentially, the Cone shows the progression of experiences from the most concrete (at the bottom of the cone) to the most abstract (at the top of the cone).

When Dale researched learning and teaching methods he found that much of what we found to be true of direct and indirect (and of concrete and abstract) experience could be summarised in a pyramid or ‘pictorial device’. He stated that the cone was not offered as a perfect or mechanically flawless picture to be taken absolutely literally. It was merely designed as a visual aid to help explain the interrelationships of the various types of audio-visual materials, as well as their individual ‘positions’ in the learning process.

It is important to note that Dale never intended the Cone to depict a value judgment of experiences; in other words, his argument was not that more concrete experiences were better than more abstract ones. Dale believed that any and all of the approaches could and should be used, depending on the needs of the learner.
What is Differentiation?

“When we reach out to the individual within the wider group we are engaging in differentiation, which relates at its simplest to any strategies that help a teacher to make a move away from ‘teaching to the middle’ of a class group.”  

NCCA

“When a teacher tries to teach something to the entire class at the same time, chances are one-third of the kids already know it; one-third will get it; and the remaining third won’t. So two-thirds of the children are wasting their time.”  

Lillian Katz

Tomlinson (1999) suggests that at its most basic level, differentiating instructions means ‘shaking up’ what goes on in the classroom so that students have multiple options for taking in information, making sense of ideas and expressing what they learn. This means that a range of learning possibilities are available for students to acquire the content, understand the information and meet the learning objectives.

The Difference Between Multiple Intelligences and Learning Styles/Preferences

The theory of multiple intelligences challenges the idea of a single IQ. Howard Gardner, the Harvard professor who originally proposed the theory, says that there are multiple types of human intelligence, each representing different ways of processing information (see page 27). One common misconception about multiple intelligences is that it means the same thing as learning styles. Multiple intelligences represents different intellectual abilities whereas learning styles, according to Howard Gardner, are the ways in which an individual approaches a range of tasks. They have been categorised in a number of different ways -- visual, auditory, and kinesthetic, impulsive and reflective, right brain and left brain, etc. Gardner argues that the idea of learning styles does not contain clear criteria for how one would define a learning style, where the style comes, and how it can be recognised and assessed. He phrases the idea of learning styles as "a hypothesis of how an individual approaches a range of materials." Everyone has all eight types of the intelligences (outlined on page 9) at varying levels of aptitude -- perhaps even more that are still undiscovered -- and all learning experiences do not have to relate to a person’s strongest area of intelligence. For example, if someone is skilled at learning new languages, it doesn’t necessarily mean that they prefer to learn through lectures. Someone with high visual-spatial intelligence, such as a skilled painter, may still benefit from using rhymes to remember information. Learning is fluid and complex, and it’s important to avoid labeling students as one type of learner. As Gardner states, "When one has a thorough understanding of a topic, one can typically think of it in several ways."
AN INTEGRATED APPROACH TO TEACHING AND LEARNING

Putting your Learning Preferences to Work

- Underline, highlight, use coloured markers
- Make colourful mind maps
- Draw pictures, symbols or graphs
- Make mental pictures
- Use flash cards
- Use acronyms
- Take notes

- Discuss what you learned with a friend
- Record material and play it repeatedly
- Write a song or rap about the material
- Teach by questioning
- Read aloud when studying

- Use hands-on activities wherever possible
- Imagine being in the experience
- Build in movement
- Take frequent study breaks
- Play music, when appropriate during activities
- Skim through reading material to get a rough idea what it is about before sitting down to read in detail

The Multiple Intelligences (MI) Chart

Verbal/linguistic intelligence
- using language to present your ideas, to express your feelings or persuade others

Logical/mathematical intelligence
- reasoning, logical thinking, handling mathematical problems

Visual/spatial intelligence
- creating and interpreting visual images; thinking in three dimensions

Bodily/kinesthetic intelligence
- feeling and expressing things physically; doing hands-on work

Musical/rhythmic intelligence
- creating and feeling a rhythm to express a mood; detecting and analysing musical themes

Intrapersonal intelligence
- (within the self)
  - understanding your own interior thoughts and feelings in a very clear way

Interpersonal intelligence
- (between people)
  - understanding the feelings, needs and purposes of others

Naturalist intelligence
- understanding nature, seeing patterns in the way nature works; classifying things

Differentiated Instruction

Checklist of questions for teachers planning differentiated learning for their students

**Building Safe Environments**
- Do students feel safe to risk and experiment with ideas?
- Do students feel included in class and supported by others?
- Is there an emotional “hook” for the learners?
- Are there novel, unique and engaging activities to capture and sustain attention?
- Are “unique brains” provided for? (learning styles and multiple intelligences)

**Recognising and Honouring Diversity**
- Does the learning experience appeal to the learners’ varied and multiple intelligences and learning styles?
- May the students work collaboratively and independently?
- May the students show what they know in a variety of ways?
- Does the cultural background of the students influence instruction?

**Assessment**
- Are pre-assessments given to determine readiness?
- Is there long enough time to explore, understand and transfer the learning to long-term memory?
- Do students have time to revisit ideas and concepts to connect or extend them?
- Is metacognitive time built into the learning process?
- Do students use log, journals, wikis or a VPL for reflection and goal setting?

**Instructional Strategies**
- Are the learning intentions clearly stated and understood by the learner?
- Will the learning be relevant and useful to the learner?
- Does the learning build on past experience or create a new experience?
- Does the learning relate to the real world?
- Are strategies developmentally appropriate and hands on?
- Are the teaching strategies varied to engage and sustain attention?
- Are there opportunities for projects, use of ICT, creativity, problems and challenges?

**Numerous Curriculum Approaches**
- Do students work alone, in pairs or in small groups?
- Are some activities adjusted to provide appropriate levels of challenge?
- Is pre-testing used for revision/enrichment?
- Are problems, enquiries and contracts considered?

AN INTEGRATED APPROACH TO TEACHING AND LEARNING

FREERICE.COM

Motivation
Students are rewarded with free rice for a 3rd world country

AFL
If you get a question wrong, it will show you the answer & then it will repeat the question later in the game

Differentiation
There are 60 different levels and students will be brought up and down automatically as they play
Ongoing Assessment
As part of their classroom work, students engage in assessment activities that can be either formative or summative in nature. Teachers assess as part of their daily practice by observing and listening as students carry out tasks, by looking at what they write and make, and by considering how they respond to, frame and ask questions. Teachers use this assessment information to help students plan the next steps in their learning. Periodically this assessment will be in more structured, formalised settings where teachers will need to obtain a snapshot of the students’ progress in order to make decisions on future planning and to report on progress. This may involve the students in doing projects, investigations, case studies and/or tests and may occur at defined points in the school calendar.

Formative Assessment
Assessment is formative when either formal or informal procedures are used to gather evidence of learning during the learning process, and used to adapt teaching to meet student needs. This process permits teachers and students to collect information about student progress, and to suggest adjustments to the teacher’s approach to instruction and the student’s approach to learning. Assessment for learning covers all of the aspects of formative assessment but has a particular focus on the student having an active role in his/her learning.

Summative Assessment
Assessment is summative when it is used to evaluate student learning at the end of the instructional process or of a period of learning. The purpose is the summarise the students’ achievements and to determine whether, and to what degree the students have demonstrated understanding of that learning by comparing it against agreed success criteria or features of quality.

<table>
<thead>
<tr>
<th>Assessment OF Learning (Summative)</th>
<th>Assessment FOR Learning (Formative)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Happens after learning takes place</td>
<td>An integral part of learning process</td>
</tr>
<tr>
<td>Information is gathered by teacher</td>
<td>Information is shared with learner</td>
</tr>
<tr>
<td>Information is usually transferred into marks</td>
<td>Information is available on quality of learning</td>
</tr>
<tr>
<td>Looks back on past learning</td>
<td>Looks forward to the next stage of learning</td>
</tr>
</tbody>
</table>
A balance between Assessment for Learning (formative assessment) and Assessment of Learning (summative assessment) is essential. Many assessment for learning strategies that are used as an integral part of the learning process can also be used as summative assessment tools if used after the learning.

Evidence of learning may include:

- Quality of answers to verbal questions that demonstrate understanding and the use of key vocabulary.
- Participation in discussions and structured group activities.
- Collections of relevant cartoons, newspaper articles etc.
- Oral presentations that demonstrate an understanding of key vocabulary and concepts and their application to real life.
- Creation of digital content using Web 2.0 tools.
- Written answers that demonstrate an understanding of key vocabulary and concepts and a range of lower and higher order thinking and application to real life.
- Demonstration of an appreciation and understanding of case study materials.
- Creative solutions to problems and scenarios.
- Creation of new ideas and resources.
- Learning logs that demonstrate real reflection on what is learned and how it was learned.
  - Where are students now in their learning?
  - Where are students going in their learning?
  - How will students get to the next point in their learning?

Activities that support on-going assessment

- Teachers share the learning intentions (explicit description of what a learner should know, understand and be able to do as a result of learning) and success criteria with students.
- Activities designed to create a context of learning for the learning Intentions.
- Feedback to be clear, concise, linked to the learning intention and success criteria in order to move the learning forward.
- Use questioning in the classroom to generate discussion and improve students’ participation in their learning (teachers to use Bloom’s Taxonomy prompts to ensure and promote a range of high and low order thinking).
- Explicit vocabulary instruction - pre-teach key words (including exam words) and concepts, semantic maps, print rich environment of student generated wordwalls etc.

- Comprehension strategies
  - Pre reading – KWL, KWHL, prediction/anticipation exercises
  - During reading – graphic organisers*, SQ3R exercises
  - After reading – 321, graphic organisers*

- Co-operative learning strategies – Think/Pair/Share/Square and Placemat exercises (these strategies will also promote oral language development).
- Embedding ICT by student using free online web 2.0 tools to create their own resources to help them learn and present their work - KWL creator, Studystack, Quizlet, Animoto, Photostory.
AN INTEGRATED APPROACH TO TEACHING AND LEARNING

- “Media Watch” – assign students to watch out for articles, videos and cartoons relevant to the subject in both digital and broadsheet media.
- Writing strategies – blogs, reports, learning log, writing frames to scaffold written answers, use of Bloom’s Taxonomy outcome verbs and stem questions to clearly indicate the level answers required for written questions, drafting, editing and re-drafting of written work, rubrics to inform self and peer-assessment.
- Rubrics designed by teachers and students for formative assessment of written and oral activities and presentations using digital tools.
- Student self-reflection – learning log, “purple pen”, write a letter to self, circle time to share reflections, self and peer-assessment, prompt questions like “let’s pause”, “reflect on what and how you have learned”.

*Graphic Organisers: ranking ladder, stair steps, chain of events, sequence charts, funnel, fishbone, brain droplets, cross classification chart, double Venn diagram, triple Venn diagram four corner organisers, tri pie, starburst, research grid.

NCCA Assessment Toolkit

<table>
<thead>
<tr>
<th>1. Learning intentions and success criteria</th>
<th>2. Feedback</th>
</tr>
</thead>
<tbody>
<tr>
<td>3. Questioning</td>
<td>4. Self-reflection</td>
</tr>
</tbody>
</table>

Learning Outcomes
Learning outcomes are statements in curriculum specifications to describe the understanding, skills and values students should be able to demonstrate after a period of learning.

Learning Intentions
A learning intention for a lesson or series of lessons is a statement, created by the teacher, that describes clearly what the teacher wants the students to know, understand, and be able to do as a result of learning and teaching activities.

Success Criteria
Success criteria are linked to learning intentions. They are developed by the teacher and/or the student and describe what success looks like. They help the teacher and student to make judgements about the quality of student learning.
Making the link between learning outcomes, learning intentions and success criteria

Here is an example of how a teacher developed learning intentions, success criteria and an assessment task linked to learning outcomes for Junior Cycle English. Further examples are available on www.curriculumonline.ie

Write a book review - 1st Year

Learning Outcomes

Oral Language

5. Deliver a short oral text, alone and/or in collaboration with others, using appropriate language, style and visual content for specific audiences and chosen purpose.

Reading

4. Use an appropriate critical vocabulary while responding to literary texts.

5. Engage in sustained private reading as a pleasurable and purposeful activity, applying what they have learned about the effectiveness of spoken and written texts to their own experience of reading.

Writing

4. Write competently in a range of text forms, for example, report, multi-modal text, review, blog, using appropriate vocabulary, tone and a variety of styles to achieve a chosen purpose for different audiences.

7. Respond imaginatively in writing to their texts showing a critical appreciation of language, style and content, choice of words, language patterns, tone, images.

Learning Intention

We are learning to read books for enjoyment, and to express that enjoyment through a well-constructed review of a chosen book.

Task

A reading project for first year students runs for 6 to 8 weeks. Students read from a list of prescribed books. Students are organised in reading groups (4/5 students in each group). Each group agrees the book to be read and reading takes place in class and at home. Four books are read in total by each group.

At the end of the group work the individual students choose a book they enjoyed and write a review. The review can be included in the student’s portfolio of writing and can also be used as the basis for an oral presentation.

Success Criteria

- Shows understanding of the chosen genre or form
  - Knowledge of the text under review
  - Conveys enthusiasm for the text (or the opposite)
  - Uses references well without giving away too much
  - Adopts an appropriate critical stance
  - Makes a clear recommendation
- Expresses ideas fluently, imaginatively, and with control of expression
- Writing displays mechanical competence

Alternatively, these criteria could be expressed in student-friendly language, e.g.:

- I show a good knowledge of the book
- I convey my enthusiasm for the text (or show clearly the parts I don't like)
- I express my ideas fluently and choose the right words and phrases most of the time
- My writing is accurate with correct spelling and grammar

Learning Intentions and Success Criteria, NCCA, 2015, page 12
“Literacy includes the capacity to read, understand and critically appreciate various forms of communication including spoken language, printed text, broadcast media and digital media.”

*(DES, 2011)*
# AN INTEGRATED APPROACH TO TEACHING AND LEARNING

## Sample Cross-Curricular Active Literacy Strategies

### Oral literacy/speaking & listening - oral text types
- Listening & speaking posters
- Pair and small group work – think/pair/share/square, placemat exercise, jigsaw, role cards
- Dictation
- Questioning – use Bloom’s Taxonomy outcome verbs, prompt questions and wait time
- Discussions/extended conversations
- Oral reports and presentations
- Storytelling and anecdotes
- Arguments and informal debates
- Interviews
- Meetings
- Interest talks - well briefed and prepared, guest speaker with accompanying worksheets
- Cloze tests – to consolidate vocabulary - discuss possible solutions/blank space
- Peer teaching

### Comprehension/reading strategies

**Pre reading**
- KWL chart – build on prior knowledge
- Explicit Vocabulary Instruction (EVI) - keyword list/notebook, “Google notebook”
- Web 2.0 Tools for vocabulary development - freerice.com, studystack.com, instagrok.com, animoto.com, etc.
- Visual word square/semantic map
- Anticipation/prediction exercise
- Cloze tests – to consolidate vocabulary - discuss possible solutions/blank spaces
- School/student dictionary – model good practice & encourage students to use it

**During reading**
- Skim – get the gist
- Fix it up strategies: re-read, underline, read ahead, read back, look at pictures/diagrams for clues, break up words, use dictionary, read aloud, ask for help!
- Visualise – pictures, symbols
- Determining importance (selecting key words/concepts), summarising - highlighter/post-its
- SQ3R – to study in detail, survey, question, read, review, recall
- Graphic organisers – record main points information

**After reading**
- Cloze tests – discuss possible solutions/blank spaces
- Scan – finds specific information
- Mindmaps – recall/summarise, use pictures and colour
- Graphic organisers – recall main points information
- BUG – answer questions, box what you are asked to do, underline important words and go back over to make sure you answered the question
## Writing

### Genres
*Note: check out the format used by other subject departments*

- **Letter** - of application, thank you, complaint
- **Recount**: Scene setting / re-telling events / closing
- **Report**: Describe the way things are / were
- **Procedure**: Recipe / instructions / illustration / diagram
- **Explanation**: Series of logical steps to explain something
- **Persuasion**: Promote point of view – statement / argument / reiteration
- **Discussion**: Different view-points – statement one side / other side / recommendations in summary
- **E-mail/blog** – protocol and etiquette

### Tools for effective writing
- Graphic organisers
- KWHL Charts
- Writing / Editing Checklists
- Bloom’s Taxonomy / Prompt Questions
- Writing Frames
- Keywords
- Semantic Mapping
- Dictionary / Thesaurus
- Digital tools: Padlet, iNote, etc.
- Connectives

### Writing Strategies
- Activation of prior knowledge
- Questioning / Bloom’s Taxonomy / 5 W and a H
- Group writing tasks
- Create an audience (Hot seat / Ask the Expert, etc)
- Brainstorming
- Self-monitoring / Peer feedback strategies

Please note: Some words can be used as an outcome verb in more than one level depending on the context.
Bloom’s Taxonomy of Critical Thinking - Sample Questions

1. Knowledge
   - What happened after . . .?
   - How many . . .?
   - Define
   - Who was it that . . .?
   - Can you name the . . .?
   - Describe what happened at . . .?
   - Can you tell why . . .?
   - Find the meaning of . . .?
   - What is . . .?
   - Which is true or false . . .?

2. Comprehension
   - Can you write in your own words . . .?
   - Can you write a brief outline . . .?
   - What do you think might happen next . . .?
   - Who do you think . . .?
   - Can you distinguish between . . .?
   - What differences exist between . . .?
   - Can you provide an example of what you mean . . .?
   - Can you provide a definition for . . .?

3. Application
   - Do you know another instance where . . .?
   - Could this have happened in . . .?
   - Can you group by characteristics such as . . .?
   - What factors would you change if . . .?
   - Can you apply the method used to . . .?
   - What questions would you ask of . . .?
   - From the information given, can you develop a set of instructions about
   - Would this information be useful if you had a . . .?

4. Analysis
   - Which events could have happened . . .?
   - How was this similar to . . .?
   - What do you see as other possible outcomes?
   - Why did . . . changes occur?
   - Can you compare your . . . with that presented in . . .?
   - Can you explain what must have happened when . . .?
   - How is . . . similar to . . .?
   - What are some of the problems of . . .?
   - Can you distinguish between . . .?

5. Synthesis
   - Can you design a . . . to . . .?
   - Can you see a possible solution to . . .?
   - Why don’t you devise your own experiment to . . .?
   - What would happen if . . .?
   - How many ways can you . . .?
   - Can you create new and unusual uses for . . .?
   - Can you develop a proposal which would . . .?

6. Evaluation
   - Is there a better solution to . . .?
   - Can you defend your position about . . .?
   - Do you think . . . is a good or a bad thing?
   - How would you have handled . . .?
   - What changes to . . . would you recommend?
   - How could this be applied to . . .?
   - How would you feel if . . .?
   - How effective is . . .?
   - What do you think about . . .?
## Sample Key Examination Words

<table>
<thead>
<tr>
<th>Term</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Analyse</td>
<td>Examine in detail and/or break down into components.</td>
</tr>
<tr>
<td>Assess</td>
<td>Describe the positives and negatives, identify the importance of.</td>
</tr>
<tr>
<td>Calculate</td>
<td>Find out by way of mathematical formula or numerical data.</td>
</tr>
<tr>
<td>Compare</td>
<td>Show the similarities and differences between.</td>
</tr>
<tr>
<td>Contrast</td>
<td>Show the differences between.</td>
</tr>
<tr>
<td>Criticise/Critique</td>
<td>Point out weaknesses as well as strengths.</td>
</tr>
<tr>
<td>Define</td>
<td>Give the precise meaning of.</td>
</tr>
<tr>
<td>Derive</td>
<td>Work out from basic principles.</td>
</tr>
<tr>
<td>Describe</td>
<td>Give the details of properties, events, processes etc.</td>
</tr>
<tr>
<td>Discuss</td>
<td>Examine or describe in detail. Make arguments for and against.</td>
</tr>
<tr>
<td>Distinguish</td>
<td>Point out the differences.</td>
</tr>
<tr>
<td>Draw</td>
<td>Make a picture or diagram.</td>
</tr>
<tr>
<td>Evaluate</td>
<td>Discuss and make a judgement on.</td>
</tr>
<tr>
<td>Examine</td>
<td>Take apart and describe a concept in great detail.</td>
</tr>
<tr>
<td>Explain</td>
<td>Make clear in a detailed manner.</td>
</tr>
<tr>
<td>Identify</td>
<td>Show you recognise.</td>
</tr>
<tr>
<td>Illustrate</td>
<td>Give examples including figures, diagrams or examples</td>
</tr>
<tr>
<td>Interpret</td>
<td>Explain, comment on and pass judgement.</td>
</tr>
<tr>
<td>Justify</td>
<td>Give reasons to support the statement.</td>
</tr>
<tr>
<td>List</td>
<td>Provide parts, reasons or qualities in itemised point form.</td>
</tr>
<tr>
<td>Prove (or disprove)</td>
<td>Give evidence.</td>
</tr>
<tr>
<td>Relate</td>
<td>Show the links, connections and associations.</td>
</tr>
<tr>
<td>Review</td>
<td>Comment on the main aspects of a subject.</td>
</tr>
<tr>
<td>Show</td>
<td>Explain with example, diagram or chart.</td>
</tr>
<tr>
<td>State</td>
<td>Write briefly without further comment.</td>
</tr>
<tr>
<td>Suggest</td>
<td>Give possible reasons and ideas.</td>
</tr>
<tr>
<td>Summarise (outline)</td>
<td>Give the key points without details.</td>
</tr>
<tr>
<td>Trace</td>
<td>Show the steps or stages to be followed.</td>
</tr>
</tbody>
</table>

## Keywords to Know

**Subject:** __________________________  **Date Begun:** __________________________

**Topic:** __________________________  **Date Completed:** __________________________

**Directions:** Look at your list of keywords for this topic and decide in which column you want to write each word.

<table>
<thead>
<tr>
<th>I don’t know the word at all</th>
<th>I’ve seen or heard the word but I don’t know the meaning</th>
<th>I think I know the meaning</th>
<th>I know a meaning</th>
</tr>
</thead>
</table>

As you learn more about the topic you can move words across to the right hand column.
Latin and Greek Roots and Affixes (Prefixes and Suffixes)

Familiarity with Greek and Latin roots, as well as prefixes and suffixes, can help students understand the meaning of new words.

Roots

A basic word to which affixes (prefixes and suffixes) are added is called a root word because it forms the basis of a new word. For example, fear is a root word and less is a suffix. Put them together to form a new word fearless.

Affixes (Prefixes and Suffixes)

Many English words are formed by taking basic words and adding combinations of prefixes and suffixes to them.

When affixes are added to the beginning of roots or root words, they are called prefixes. For example, the most common prefix is un-, which meant not opposite of. If you add un- to the word happy, the new word becomes unhappy, which means not happy.

When affixes are added to the end of roots or root words, they are called suffixes. The most common suffixes are -s and -es, which mean more than one (or the plural) of the word. Adding -es to wish, changes the meaning of the word to more than one wish.
### Common Latin Roots

<table>
<thead>
<tr>
<th>Latin Root</th>
<th>Definition</th>

Anticipation Exercises

Are advance organizers that can be used to activate and assess students’ prior knowledge, focus reading, and motivate reluctant readers by stimulating their interest in the topic.

(Dean, Hubbell, Pitler, & Stone, 2012)

How to use an Anticipation Exercise

1. Identify the major concepts that you want students to learn from reading. Determine ways these concepts might support or challenge students’ beliefs.

2. Create four to six statements that support or challenge the students’ beliefs and experiences about the topic under study. The statements can address important points, major concepts, controversial ideas, or misconceptions.

3. Ask students to react to and formulate a response to each statement and be prepared to defend their opinions. Students can work in groups if the subject matter is fairly complex, or you can ask students to fill in their answers on their own.

4. Discuss each statement with students before they read the material. Ask one student from each side of the issue (for/against, agree/disagree) to explain and justify his or her response.

5. Have students read the selection with the purpose of finding evidence that supports or refutes their responses on the guide.

6. After students finish reading the selection, have them confirm their original responses, revise them, or decide what additional information is needed. Encourage students to rewrite any statement that was not true in a way that makes it true.

(Urquhart and Frazee, 2012)

Using Writing Frames

Students need support in developing confidence in the different genres. Writing frames can help students structure their writing. They supply students with the outline, the connectives, which will knit the particular piece of writing. They also supply students with the logical sequence of a piece of writing. The idea is that you give the student a frame for whatever genre they need to write in. Ideally you tailor the frame to the particular exercise topic they are writing about.

The sentence stems can be written into their copies and they work in pairs to develop the text further. Negotiation around the text helps develop a fluid piece of writing.

**Step One: Teacher Demonstration**
The teacher models writing a piece of text in a particular genre. The teacher talks out loud to illustrate to the students what’s involved in shaping their work. Initially, the teacher may need to do all of the writing. Wall charts can be useful at this stage.

**Step Two: Teacher and Student together**
The teacher writes with the students. The teacher does all the hard parts and is always on hand. All research shows that students learn more effectively when supported by an expert.

**Step Three: Students on their own with Writing Frames**
The students should write in pairs with the support of a writing frame in whatever genre they are using. The frame should be tailored to the topic / task at hand. The students eventually produce a best copy as a result of working together. The teacher continues to support if necessary.

**Step Four: Independence**
The students should write independently once they feel confident.

The following are examples of the six frames mentioned – more are contained in the Appendix (pages 87-91). They can be adapted to suit any topic. The frames are made up of sentence stems not questions.

The writing frames are a development of the work of Vygotsky, L. (1978) _Mind in Society: the development of higher psychological processes_ and are adapted from the work of Lewis, M. & Wray, D. (1997).

www.pdst.ie/node/4434
Numeracy

Numeracy is **NOT LIMITED** to the ability to use numbers, to add, subtract, multiply and divide.

**Numeracy involves being able to:**
- think and communicate mathematically;
- make sense of data (gathering, representing and interpreting);
- see and understand patterns and trends;
- recognise situations where mathematical reasoning can be applied to solve problems;
- have a spatial awareness;
- have a positive disposition towards investigating, reasoning and problem solving.

**Numeracy encompasses the ability to use mathematical understanding and skills to:**
- solve problems;
- meet the demands of day-to-day living in complex social settings.

*Adapted from* Literacy and Numeracy for Learning and Life, DES 2011
Numeracy in Various Subject Areas

There are ample opportunities to acquire numeracy skills and concepts in your subject area. In addition to this, due cognisance should be paid to appropriate questioning, explanations, justifications and higher order thinking where appropriate. Where numeracy arises in a natural, uncontrived, manner the language, procedure, and concept should be dealt with in a manner that is consistent to that of the mathematics department.

1. In the areas of number, money and measure
   - Are students encouraged to estimate, calculate, and check their answers?
   - Are the approaches used in line with and of the same standard as those the students would use in mathematics lessons?

2. In data handling
   - Are students encouraged to choose appropriate graphical representations?
   - Are students encouraged to retrieve, interpret and draw conclusions from the data presented?
   - Are the uses and misuses of statistics discussed?
AN INTEGRATED APPROACH TO TEACHING AND LEARNING

3. In shape and space
   ➢ Do students express their answers using the correct units?
   ➢ Are the students encouraged to draw diagrams and other representations (graphs, symbols and words) to develop and explain their ideas?

4. When using relationships and patterns
   ➢ Are students encouraged to explore patterns and trends in lessons?
   ➢ Are students encouraged to explore relationships in lessons?

### AN INTEGRATED APPROACH TO TEACHING AND LEARNING

#### Key Skills Senior Cycle Framework, NCCA, 2009

**WORKING WITH OTHERS – LINK TO NCCA TOOLKIT**

*This key skill highlights the role that working with others plays in learning and in reaching both collective and personal goals. It helps learners gain some appreciation of the dynamics of groups and the social skills needed to engage in collaborative work. It contributes to an appreciation that working collectively can help.*

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>LEARNING OUTCOMES – I CAN..........................</th>
</tr>
</thead>
</table>
| Working with others in a variety of contexts with different goals and purposes | • recognise that working with others is an intrinsic part of home, school, work and leisure  
• explore the contexts in which they work in groups (e.g., learning groups, sports groups, family groups) and examine the differences between them  
• recognise the need to respond flexibly in different contexts |
| Identifying, evaluating and achieving collective goals | • work in pairs and larger groups to plan the work of the group  
• co-operate with other members of the group to identify collective goals  
• co-operate with group members to identify how different roles can contribute to the overall goals  
• communicate ideas and needs within the group  
• agree action plans for achieving the goals  
• agree methods for keep each other informed of progress |
| Identifying responsibilities in a group and establishing practices associated with different roles in a group | • help to break tasks down into parts as a way of sharing the work of the group  
• take on the responsibilities of the role whether as a team member or a team leader  
• recognise how his/her role blends with the responsibilities of others in the group  
• express views about how the work of the group is progressing |
| Developing good relationships with others and a sense of well-being in the group | • listen carefully to other points of view  
• develop empathy and see alternative perspectives  
• express emotion in appropriate ways  
• help others to feel included in the group  
• help motivate the group to persist in the face of difficulties  
• celebrate the achievements of the group |
| Acknowledging individual differences, negotiating and resolving conflicts | • respect the rights and views of others in the group  
• recognise that different positions and viewpoints are likely to be adopted and expressed  
• identify areas of agreement and disagreements among the different positions  
• make suggestions about possible compromises and alternative ways forward  
• agree ways to resolve conflict |
| Checking progress, reviewing the work of the group, and personally reflecting on one’s own contribution | • keep to deadlines and agreed plans  
• monitor progress in the group against agreed plans  
• negotiate individual responsibilities  
• critically evaluate and change the approach of the group if necessary  
• participate in evaluating the outcomes against the collective goals  
• reflect on their own contribution to the group and identify strengths and weaknesses  
• identify ways of further improving their skills in working with others |
Basic Elements of Co-operative Learning

Co-operative learning can be defined as a **structured form of group work** where students pursue common goals while being assessed individually. The most common model of co-operative learning is that of Johnson, Johnson and Smith. This model incorporates five specific tenets, which are individual accountability, mutual interdependence, face-to-face promotive interaction, appropriate practice of interpersonal skills, and regular self-assessment of team functioning. While different co-operative learning methods exist, the core element held in common is a focus on co-operative incentives rather than competition to promote learning.

Basic Elements of Co-operative Teams

**Positive Interdependence**
Team members perceive that they need each other in order to complete the group’s task (“sink or swim together”). Instructors may structure positive interdependence by establishing **mutual goals** (maximize own and each other’s productivity), **joint rewards** (if all group members achieve above the criteria, each will receive bonus points), **shared resources** (members have different expertise), and **assigned roles** (summarizer, encourager of participation, elaborator).

**Individual Accountability**
Assessing the quality and quantity of each member’s contributions and giving the results to the group and the individual.

**Face-to-Face Promotive Interaction**
Team members promote each other’s productivity by helping, sharing, and encouraging efforts to produce. Members explain, discuss, and teach what they know to teammates. Instructors structure teams so that members sit knee-to-knee and talk through each aspect of the tasks they are working to complete.

**Interpersonal And Small Group Skills**
Groups cannot function effectively if members do not have and use the needed social skills. Instructors emphasize these skills as purposefully and precisely as jobperformance skills. Collaborative skills include instructorship, decision-making, trustbuilding, communication, and conflict-management skills.

**Group Processing**
Groups need specific time to discuss how well they are achieving their goals and maintaining effective working relationships among members. Instructors structure group processing by assigning such tasks as (a) list at least three member actions that helped the group be successful and (b) list one action that could be added to make the group even more successful tomorrow. Instructors also monitor the groups and give feedback on how well the groups are working together.

# Role of the Teacher in Co-operative Learning Groups

<table>
<thead>
<tr>
<th>Role</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Make Pre-Instructional Decisions</td>
<td>In every lesson, the teacher formulates objectives, decides on the size of the groups, chooses a method for assigning students to groups, decides which roles to assign to group members, arranges the room and arranges the materials students need to complete the assignment.</td>
</tr>
<tr>
<td>Explain the Task and Co-operative Structure</td>
<td>In every lesson, the teacher explains the academic assignment to students, explains the criteria for success, structures positive interdependence, explains the individual accountability and explains the behaviours that they expect to see during the team-work session.</td>
</tr>
<tr>
<td>Monitor and Intervene</td>
<td>While the teacher conducts the lesson, he/she monitors the learning groups and intervenes when needed to improve task work and teamwork. He/she also brings closure to the lesson by consolidating the material learned throughout the lesson.</td>
</tr>
<tr>
<td>Evaluate and Process</td>
<td>Teachers assess and evaluate the quality and quantity of student achievement and ensure students carefully process the effectiveness of their learning groups. Teachers also ensure that students create plans for improvement and praise the hard work of team members.</td>
</tr>
</tbody>
</table>
AN INTEGRATED APPROACH TO TEACHING AND LEARNING

Assigning Students to Groups

- The teacher assigns the group.
- Each group should have a mix of abilities, gender, motivation levels, etc.
- Do not necessarily put students with their friends unless you have a good reason to do so. If students protest, explain that the groups will be changing later on so they will have opportunities to work with other groups.
- Start out with small groups (2 or 3) until students become skilful in group work. The shorter the time available, the smaller the learning group should be.
- Assign each student a job or role but rotate them frequently.
- Graduate the tasks so that there are some tasks that everyone can do with ease and some more challenging tasks or questions. That way, everyone can contribute something to the group. Make your expectations clear so that students know what you want them to do and how to behave.
- Observe and monitor students working.
- Agree ground rules.

Sample Ground Rules for Working with Others

(It’s best if the students agree on their own)
- every group member is responsible for completing the task.
- every group member is responsible for making sure all the group members know and understand the answers.
- be open to others ideas
- take turns
- look at the speaker
- help each other
- no put downs
- criticize ideas, not people
- use quiet voices / inside voices / team voices
- sit knee to knee and eye to eye
- always make eye contact with others when you are speaking
- always look at the person speaking and listen
- include everyone and encourage everyone’s participation in the work
- individual responsibility - make sure you learn something interesting and useful today
- team responsibility - make sure your team learns something interesting and useful today

NCCA toolkit
Social Skills needed for Group Work

Effective small-group work requires preparation, and a number of preconditions have to be met for it to be effective. Firstly, students must be able to cooperate with one another and provide each other with feedback in a constructive way. A number of studies have found that while small-group work is positively related to achievement when group interaction is respectful and inclusive, use of group work is actually negatively related to achievement if group interaction is disrespectful or unequal. This can happen when students don’t have the necessary social skills to interact positively with peers. Skills of sharing, turn-taking, communication, and listening cannot be taken for granted.

One simple strategy which can help develop listening skills is to ask students to paraphrase what another student has said before allowing them to contribute a new idea. Use paraphrasing to: avoid confusion (Let me see if I heard you right…), confirm understanding (Are you saying that…?), try to understand something from another’s perspective (In other words, what you mean is…).

Other ways of teaching the social skills needed for successful group work include building a T Chart and keeping it on view in the classroom. To do this you write the name of the skill to be practiced at the top of a chart. Label the left side 'Looks like' and the right side 'Sounds like'. Then under each column ask the students to brainstorm examples for each side and write them down. This might look something like this:

**Working Together**

<table>
<thead>
<tr>
<th><strong>Looks like:</strong></th>
<th><strong>Sounds like:</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>everyone has a job</td>
<td>different voices talking</td>
</tr>
<tr>
<td>people look involved</td>
<td>&quot;inside voices&quot;</td>
</tr>
<tr>
<td>might be movement</td>
<td>listening attentively</td>
</tr>
<tr>
<td>looking at whoever is talking</td>
<td>having fun while learning</td>
</tr>
<tr>
<td>knee to knee and eye to eye</td>
<td></td>
</tr>
</tbody>
</table>

</table>
Helpful Phrases for Working with Others

*I think…. because (i.e. whenever someone makes a statement they must justify it.)

I agree/disagree because…

How can we back-up this idea with evidence?

I'm not sure what you mean. Would you like me to go over that again?

Do I understand you correctly, are you saying…..?

Here's a way to remember this…

I think that's an interesting point but we'd better stick with the question we're working on right now.

Let's look at the other side of the argument for a minute.

Let's summarise our main ideas so far.

Let's check to see if everyone agrees with what we've written down so far

Let's take turns to make sure that everyone has a chance to speak.

Why don't we try it this way as we don't have much time left?

Come on, let's keep moving! Let's hear from someone who hasn't had a chance to speak yet?

*NCCA toolkit*

<tbody>
<tr>
<td>Reader</td>
<td>The reader’s task is to read the material to the group slowly, carefully and with expression so that group members will be engaged and interested in the piece and will remember it for a long time</td>
</tr>
<tr>
<td>Recorder</td>
<td>The role of the recorder is to make a note of any ideas/suggestions/answers coming from the group. The recorder will also work with the team in reaching consensus on the answers that the group like best which in turn will be reported back to the full group</td>
</tr>
<tr>
<td>Checker</td>
<td>The checker’s role is to ensure that everyone in the group is contributing and sharing ideas. The checker will ask probing questions to members of the group to determine if each member of the group can explain their answers clearly. When decisions on best answers are made, the checker will strive to ensure that everyone in the group can explain the answer clearly and give reasons for that particular answer</td>
</tr>
<tr>
<td>Summariser</td>
<td>At various stages in the group discussion the summariser will give a quick run through of ideas shared to date and ensures that everyone in the group agrees which what was been discussed/decided</td>
</tr>
<tr>
<td>Supporter/Encourager/Praiser/Energiser</td>
<td>This person has many tasks including encouraging silent members of the group to participate, praising any good ideas/suggestions and effort and keeping the group energised at all times</td>
</tr>
<tr>
<td>Task Master/Director</td>
<td>The Task Master/Director will define the task for the team, help the group decide how to do the task and decide with the group who will do what</td>
</tr>
<tr>
<td>Scout</td>
<td>The scout is the person who is allowed to move between groups to seek ideas/opinions and/or swap ideas/suggestions</td>
</tr>
<tr>
<td>Dictionary Manager/Textbook Checker/Calculator Checker</td>
<td>This person will have the role of using a dictionary/textbook/calculator to check for the accuracy of the work and/or to gleam more ideas which will assist the group in completing the task</td>
</tr>
<tr>
<td>Turn Taker</td>
<td>The turn taker will ensure that each member of the group has an opportunity to contribute to the group discussion. They ensure a healthy balance between the dominant and silent contributors in the group</td>
</tr>
<tr>
<td>Timekeeper</td>
<td>The role of the ‘Timekeeper’ is to ensure that the group is abiding by the time set for the particular task. The time taker will also work in conjunction with the turn taker to ensure that all members of the group have an opportunity to contribute within the allocated time frame</td>
</tr>
<tr>
<td>Group Observer</td>
<td>The group observer is responsible for moving between the groups, observing co-operative learning roles in each group and allocating bonus points to members of the group</td>
</tr>

AN INTEGRATED APPROACH TO TEACHING AND LEARNING

Role Cards

FACILITATOR

ROLE:
The Facilitator establishes a collaborative relationship within the group, focuses the work around the learning task, and ensures that every group member feels included and has an opportunity to participate.

PROMPTS:
• Let’s hear from __________ next....
• That’s interesting, but let’s go back to our task....
• Let’s look again at this area....
• What strategies will we use to do this?

CHECKER

ROLE:
The Checker ensures that everyone on the team is sharing ideas and asks probing questions to ensure that the material is understood by all.

PROMPTS:
• What do you mean by that?
• Could you clarify that statement?
• Could you please repeat what you have just said?
• Could I interrupt you at this point to ask.....?
AN INTEGRATED APPROACH TO TEACHING AND LEARNING

Role Cards

**RECORDER**

**ROLE:**
The Recorder makes notes of ideas, conclusions and decisions made by the group. S/he may use a graphic organiser or flipchart to illustrate same.

**PROMPTS:**
- How would you like me to write that down?
- I think you said… Is that right?
- Should we put this idea here?
- How about I circle the ideas that the team likes best?
- Let’s link this idea here…with this one, here....

**TIMEKEEPER**

**ROLE:**
The Timekeeper ensures that each member of the group contributes equally and receives equal time. S/he encourages the group to stay on task and times the proceedings.

**PROMPTS:**
- We are just at the halfway point
- We have five minutes left to discuss this
- Could we wrap this up in the next three minutes?
- It’s _____ time to make his/ her point now
- Could I ask _____ for his/ her opinion at this point?
AN INTEGRATED APPROACH TO TEACHING AND LEARNING

Using Co-operative Learning to Prevent Behaviour Problems

If you’re currently struggling to get students motivated in classes and face continuous behaviour problems, cooperative learning can help. Properly managed group-work sessions can reduce behaviour problems in five ways:

- **There is less incentive for students to disrupt the lesson** to get the teachers attention because they are already receiving attention – from the other members of the group.

- **Positive peer relations are developed.** As a result of students helping each other to reach a common goal, they build strong bonds. As the sense of community grows in the class through regular group work sessions, there are fewer arguments between students.

- **Lower achieving students gain confidence and motivation.** By working collaboratively with higher achieving students, low achieving students are able to take part in activities without feeling they lack the necessary skills and understanding. By being actively involved in the class activities instead of being bored or frustrated, they are less prone to disrupt. The high ability students also benefit from the process of guiding and supporting their fellow group members, as their understanding of the material is reinforced through teaching others.

- **Social skills are naturally developed**, skills like self-expression, decision-making, responsibility and accountability, sharing, listening and conflict management are naturally practiced and developed during co-operative learning sessions. This has the knock-on effect of reducing the occurrence of behaviour problems brought about due to a lack of these skills.

- **It saves the teacher time.** Once students get used to the co-operative learning framework, the students begin to teach themselves. The teacher becomes free from constant requests for attention and can give quality support when it is required rather than when it is demanded.

© Behaviour Needs
Think - Pair - Share - Square

This strategy allows you to quickly engage the whole class without losing any time moving furniture or formulating groups. Think-Pair-Share-Square is a series of steps that enables the students move through the stages of individual work, paired work and group work before feeding back to the whole class very simply.

Think: The students spend time in silence writing or thinking about their own ideas.

Pair: Students turn to the person next to them to discuss their ideas with a partner.

Share: Students share their answers with another group

Square: Two pairs work together as a new group to complete the task of agreeing on a response from the first two answers that the pairs have come up with. They also elect who will be speaking. This stage is crucial for extracting the high level explanation behind why an answer was chosen. This reduces the amount of answers that a teacher has to elicit from a class. It helps promote student learning as students discuss and teach each other.

### Think-Pair-Share

Think or write about the question. Share or listen. Then switch roles. One person talks, the other listens. Be ready to share both of your ideas.

<table>
<thead>
<tr>

Read and Explain Pairs

Whenever you give material to students to read, students may read it more effectively in co-operative pairs than individually.

1. Assign students to pairs (one high reader and one low reader in each pair). Tell students what specific pages you wish them to read. The expected criterion for success is that both members are able to explain the meaning of the assigned material correctly.

2. The task is to learn the material being read by establishing the meaning of each paragraph and integrating the meaning of the paragraphs. The co-operative goal is for both members to agree on the meaning of each paragraph, formulate a joint summary, and be able to explain its meaning to the teacher.

3. The procedure the student pairs follow is:
   a. Read all the headings to get an overview.
   b. Both students silently read the first paragraph. Student A is initially the summarizer and Student B is the accuracy checker. Students rotate the roles after each paragraph.
   c. The summarizer summarizes in his or her own words the content of the paragraph to his or her partner.
   d. The accuracy checker listens carefully, corrects any misstatements, and adds anything left out. Then he or she tells how the material relates to something they already know.
   e. The students move on to the next paragraph, switch roles, and repeat the procedure. They continue until they have read all the assignment. They summarize and agree on the overall meaning of the assigned material.

4. During the lesson you (the teacher) systematically (a) monitor each reading pair and assist students in following the procedure, (b) ensure individual accountability by randomly asking students to summarise what they have read so far, and (c) remind students that there is intergroup co-operation (whenever it is helpful they may check procedures, answers, and strategies with another group or compare answers with those of another group if they finish early).
AN INTEGRATED APPROACH TO TEACHING AND LEARNING

Placemat Activity

The Placemat Activity can be used with a wide variety of questions and prompts or for a wide range of learning goals, e.g.

- To encourage students to share ideas and reach a consensus about a topic/idea
- To activate the prior knowledge of a topic among students
- To help students share problem-solving techniques
- To take group notes during a video or oral presentation
- To summarise learning after the class and/or to be used as an opening review for the subsequent lesson

Groups of four students are ideal for the placemat technique but it can also work with 3 – 6 students by amending the template.

Tips

1. Discuss, record and post a labelled diagram of the Placemat on the board so that students always have a visual reference of the organisation and required actions.
2. Consider the composition of the small groups and vary the membership according to the students’ learning styles and interaction, subject-matter expertise, etc. Some groups will require more teacher support in carrying out the task in other groups.
3. Use the placemats as a record of collective student thinking and post the ideas for other groups to see.

Jigsaw Method

**Rationale**

Using the jigsaw teaching strategy is one way to help students understand and retain information, while they develop their collaboration skills. This strategy asks a group of students to become “experts” on a specific task or body of knowledge and then share that material with another group of students. These “teaching” groups contain one student from each of the “expert” groups. Students often feel more accountable for learning material when they know they are responsible for teaching the content to their peers. The jigsaw strategy is most effective when students know that they will be using the information they have learned from each other to create a final product, participate in a class discussion, or acquire material that will be on a test.

**Procedure**

**Step One: Preparation**

Select the material you want students to explore. It might be a collection of documents (e.g. readings, images, charts) or it could be a series of questions. Also, decide how many students you would like to work together in an “expert” group. Teachers often find that groups of 3 - 5 students work best. Sometimes it makes sense to make groups randomly (e.g. by counting off) while other times you might want to divide students in advance to balance strengths, needs and interests. You can assign the same material to more then one group.
AN INTEGRATED APPROACH TO TEACHING AND LEARNING

**Step Two: Students Work in Expert Groups**

In this step, small groups of students (“experts”) are responsible for reviewing specific material so that they can share this information with their peers. “Expert” groups work best when students have clear expectations about the type of information they are supposed to present to their peers. Therefore, it is often helpful to provide a chart or a series of questions that students answer together in their expert groups. It is important that all group members understand the material they are responsible for presenting. To avoid having students present inaccurate or misleading information, teachers can review and approve of content before this information is shared with students in the other groups.

**Step Three: Students Meet in Teaching Groups**

After “expert” groups have a solid understanding of the material they will be presenting, assign students to “teaching” groups. “Teaching” groups are typically composed of one or two members from each expert group. Experts take turns presenting information. Often teachers ask students to take notes while the experts present. For greater accountability it is best if students are required to synthesize the material presented as part of an assignment, presentation or discussion.

**Step Four: Synthesis and Reflection**

“Teaching” groups can be assigned a task that requires them to synthesize the information that has been shared, such as answering a larger question, comparing texts, or generating a plan of action. Or, students can synthesize information individually or in pairs. It is appropriate to structure a class discussion that asks students to draw from the material they just learned to answer a question about history and apply this information to society today.
AN INTEGRATED APPROACH TO TEACHING AND LEARNING

Using the Little Book

- This is a way of getting students to learn small pieces of information (e.g. definitions) by teaching one another.
- Divide the material to be learned into a number of small parts.
- Teach the students to make The Little Book (see previous page of this pack)

Preparing the little book for use

Instruct students to:

1. Write the title of the book on the front cover
2. Write their name on the front cover
3. Number each page
4. Place a title (e.g. definition term) on each page

Using the Little Book

- Each student is given a slip of paper with a small amount of information.
- They learn their piece of information and write it in their own words on the appropriate page in their book. The teacher takes back the slips of paper (to ensure that they explain the information to each other and do not simply copy it)
- The students’ task is to fill their book.
- Student A teaches student B the piece of information he/she has learned. When student A is satisfied that student B knows it, student B writes it onto the appropriate page in his/her book and student A checks that B knows the information and then initials the page to confirm this.
- Student B then does the same.
- The students circulate around the class until they have all completed their little book

Notes

It is recommended that students teach their piece of information at least three times before being given permission to teach something they have been taught by a class mate.
AN INTEGRATED APPROACH TO TEACHING AND LEARNING

Making the Little Book

Take an A4 or A3 piece of paper

1. Fold it in two on the long side

2. Fold in two along the short side

3. Fold the front part in two back on itself

4. Fold the back part back on itself – there should now be an accordion type of movement possible

5. Split the top of the front and the back of the accordion

6. You now have a book with five leaves (one very thick leaf in the middle)

Inquiry-based Learning

The essence of inquiry-based learning is that students participate in the planning, development and evaluation of projects and activities. Teachers can take many approaches to crafting an inquiry-based project, but Dr. Cornelia Brunner of the Center for Children and Technology breaks it into four main parts: Posing Real Questions, Finding Relevant Resources, Interpreting Information and Reporting Findings.

Many useful templates for planning and evaluating your project can be found here: http://bit.do/inquiryprocess

AN INTEGRATED APPROACH TO TEACHING AND LEARNING

Summary of the main chapters:

1. Analysing and designing learning environments for the 21st century
2. Historical developments in the understanding of learning
3. The cognitive perspective on learning: 10 cornerstone findings
4. The crucial role of motivation and emotions in classroom learning
5. Learning from the developmental and biological perspective
6. The role of formative assessment in effective learning environments
7. Co-operative learning: what makes group work work?
8. Learning with technology
9. Prospects and challenges to inquiry-based approaches to learning

Chapter 9: Prospects and challenges for inquiry-based approaches to learning (Brigid Barron and Linda Darling-Hammond, Stanford University School of Education)

Need for Inquiry-based Approaches to Support 21st Century Skills

Students need to:

- Develop interpersonal and self-directional skills
- Manage projects
- Competently find resources and use tools
- Think critically
- Solve complex problems
- Demonstrate application of learning
- Engage in more ‘authentic’ learning (real life)

Three Approaches

- Project-based
- Problem-based
- Learning by Design
AN INTEGRATED APPROACH TO TEACHING AND LEARNING

Project-based Learning

Involves the completion of complex tasks that typically result in a realistic product, event or presentation to an audience. The task must be:

1. Authentic, by posing problems that occur in the real world and that people care about.

2. Driving questions that lead students to encounters central concepts or principles of a discipline.

3. Focused on a constructive investigation that involves inquiry and knowledge building.

4. Student-driven, in that students are responsible for making choices and for designing and managing their work.

Problem-based Learning

Is a specific type of project that aims to teach problem definition and solution strategies. Students work in small groups to investigate meaningful problems, identify what they need to learn in order to solve a problem, and generate strategies for solution.

Problems are:

• realistic and ill-structured  (not textbook but real word problems with multiple solutions and methods for reaching them);

• resonate with students’ experiences;

• promote argumentation;

• provide opportunities for feedback;

• and allow repeated exposure to concepts.

Learning by design

A third genre of instructional approaches has grown out of the idea that children learn deeply when they are asked to design and create an artefact that requires the understanding and application of knowledge.

• The complexity of the work often dictates the need for collaboration and distributed expertise.

• A variety of valued cognitive tasks are employed such as setting constraints, generating ideas, prototyping, and planning through “storyboarding” or other representational practices.

• Design-based approaches can be found in subjects such as science, technology, art, engineering and architecture.
AN INTEGRATED APPROACH TO TEACHING AND LEARNING

Inquiry-based Model

Planning
- Identify a topic area for inquiry
- Identify possible information sources
- Identify audience and presentation format
- Establish evaluation criteria
- Outline a plan for inquiry

Evaluating
- Evaluate the product
- Evaluate the inquiry process and inquiry plan
- Review and revise personal inquiry model
- Transfer learning to new situations/beyond school

Retrieving
- Develop an information retrieval plan
- Locate and collect resources
- Select relevant information
- Evaluate information
- Review and revise the plan for inquiry

Sharing
- Communicate with the audience
- Present new understandings
- Demonstrate appropriate audience behaviour

Processing
- Establish a focus for inquiry
- Choose pertinent information
- Record information
- Make connections and inferences
- Review and revise the plan for inquiry

Creating
- Organize information
- Create a product
- Think about the audience
- Revise and edit
- Review and revise the plan for inquiry

Reflecting on the Process

Source: Focus on Inquiry
A Teacher’s Guide to Implementing Inquiry-based Learning
(Tips for Teachers in an Inquiry-Based Classroom)
AN INTEGRATED APPROACH TO TEACHING AND LEARNING

Inquiry Based Learning: Tips for Teachers

Adapted from Focus on Inquiry - A Teacher’s Guide to Implementing Inquiry Based Learning (2004)

Tips for Teachers: Building a Culture of Inquiry

- Approach inquiry with enthusiasm and excitement.
- Admit that inquiry involves the unexpected for you and for students.
- Model the inquiry process in your instruction (show as well as tell).
- Use the language of inquiry.
- Post the Inquiry Model (see p. 10) in your classroom and the school library.
- Facilitate the process—discuss, clarify, support and monitor.
- Evaluate the process (and make it really count).
- Use technology to do what would be impossible otherwise.
- Set a specific time for inquiry-based learning.

Tips for Teachers: Building for Student Success

- For those students with little or no background knowledge of a topic, teachers must provide information and background that motivate students. Students need past experience and knowledge of a topic in order to do productive inquiry (Jonassen, 2000).
- Teachers often need to help inquirers understand that people with particular beliefs and purposes created the information they find, whether in a library book, in a newspaper or on an Internet site, and that information is not just objective facts.
- Teaching students how to compare, contrast, and synthesize data helps them through the disorder that can occur in this phase.
- Teaching students audience appreciation skills and strategies and focusing on the positive helps to support students through this phase.
- Many schools develop a school-wide plan for teaching inquiry based learning skills and strategies so that all students build on past learnings and experience inquiry-based learning projects.
- Using a classroom library to offer resources on a topic is one way of introducing a variety of resources to support the inquiry.

Tips for Teachers: Reflecting on the Process at any Phase

- Teach students that inquiry involves the unexpected for teachers and students.
- Teach students to self-check: “Is this information even remotely connected to my question?”
- Share the “high point of the day” and the “frustration of the day.”
AN INTEGRATED APPROACH TO TEACHING AND LEARNING

- Teach students to self-check: “What did I learn? How well did I achieve my goal? What changes did I have to make to meet my goal? What changes will I make the next time I do this? Where else can I use these strategies?”

Tips for Teachers: Retrieving
- Teach the difference between relevant (generally related) and pertinent (directly related) information.
- Beware of hyper-leaping—teach searching skills for databases and for the Internet.
- Teach students to self-check—“Is this information even remotely connected to my question?”
- Expand resource horizons—use databases.
- Teach critical reading skills—skimming and scanning skills.
- Teach critical thinking skills—comparing and contrasting.
- Teach interviewing skills and protocols.
- Use the Internet to delve into topics—preview and bookmark appropriate sites.
- Help students to evaluate websites—currency, coverage, objectivity, accuracy, authority.
- Teach students what to do when they come across inappropriate materials (variation on “stop, drop and roll”).
- See Appendix K, p. 101.

Tips for Teachers: Processing
- Teach critical reading skills—skimming and scanning skills.
- Teach critical thinking skills—comparing and contrasting.
- See Appendices L and M, pp. 102–103.

Tips for Teachers: Creating
- Limit the use of time and technology for “glitz.”
- Use technology to do what would be impossible otherwise.
- See Appendix N, p. 104.

Tips for Teachers: Sharing
- For oral presentations, provide tips on effective public speaking.
- For presentations using technology, book equipment well in advance and allow sufficient time to address glitches.
- Teach audience appreciation to your class.
- Be supportive of student products.
- Allow sufficient time for sharing.
- Review Researching and Making Presentations: Grades 5 to 12 for ideas.
- See Appendices O and P, pp. 105–106.
AN INTEGRATED APPROACH TO TEACHING AND LEARNING

Tips for Teachers: Evaluating

- Stick to predetermined evaluation criteria and processes.
- Evaluate the final product as part of the whole process.
- Use a separate rubric as an assessment instrument.
- Involve students in assessment.
- Consider assessment tools such as the Classroom Assessment Tool Kit for the Information and Communication Technology (ICT) Program of Studies.
- See Appendices Q and R, pp. 107–108.

Tips for Teachers: Metacognition

Teachers work with students to assist them in understanding their thoughts during the inquiry process. Students’ personal growth and motivation to learn are enhanced when teachers:

- pose questions about thinking and feeling, and allow students to reflect upon their learning progress
- honour diverse learning styles and perspectives
- model the inquiry process out loud on a consistent basis
- explicitly call the students’ attention to the Inquiry Model and to the particular phase at which they are working
- set timelines
- review the inquiry process through class discussions, journal writing and ongoing and retrospective analyses of the data generated throughout the inquiry process.

Roles of the Teacher in an Inquiry-based Classroom

- Motivator
- Diagnostician
- Guide
- Innovator
- Experimenter
- Researcher
- Modeller
- Mentor
- Collaborator
- Learner (Crawford, 2000)
